DETAILED ACTION

Allowable Subject Matter

1. Prosecution on the merits of this application is reopened on claims 7-25, 29-30, and 40-81 considered unpatentable for the reasons indicated below:
2. The indicated allowability of claims 7-25, 29-30, and 40-81 is withdrawn in view of the newly discovered reference(s) to Hoogendam et al. (US 7193681 B2) in view of Akimoto et al. (US 20020001082 A1) and further in light of (RD 432101 A).

Election/Restrictions

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 7-16, 29-30 and 40-45; 17-25 and 46-52; 53-68; and 77-81, are drawn to an exposure apparatus and a method of using that require that a wafer is transferred from outside of the apparatus, classified in class 250, subclass 491.1.
 - II. Claims 69-74 and 75-76, are drawn to an exposure method for using an exposure apparatus not requiring a wafer to be transferred from outside of the apparatus, respectively, classified in class 250, subclass 493.1.

The inventions are distinct, each from the other, because of the following reasons:

4. Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus

Art Unit: 2881

as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process (i.e. the transference of the wafer from outside of the apparatus).

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and/or examination burden if restriction were not required because at least the following reason(s) apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement

may be traversed (37 CFR 1.143) **and (ii) identification of the claims encompassing the elected invention.**

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
